

Use this chart to convert computer game injuries to our FBN injury rule

SOM computer game length of injury	FBN length of injury
Remains in game or 1 game	Rest of game
2 to 6 games	Rest of game plus 1 game
7 to 15 games	Rest of game plus 2 games

To change to length of injury in the computer game you will manually manipulate the game for the current game. This will only involve SOM injuries when the player remains in the game. For the FBN he must be removed from the game for all injuries. You will just substitute for the player.

For any SOM injury that was for one game or more you will need to do the following after the current game is complete.

Go to:

Statistics

Update Statistics

Click on **Team Info**

Find the team involved.

Find the player on the list that has the injury

Scroll down to the bottom of the page to injury days left

Change the injury days left to either 0, 1, or 2 depending on the chart above

Return to the main screen.

A helpful hint: If the FBN injury length is longer than the number of games left in the series then you won't need to do anything. Just reset all injuries before the next series.
