

Loading the Computer League File

These instructions will load the computer league file. When you see 20xx in the instructions substitute the league year that you are loading.

Step by step of how I do it....

1. Download the new League backup .lzp file that Bruce G. has produced. Put it somewhere other than CDROMB/BACKUP, that may confuse it.
2. Open the Strat Game application.
3. If you already have the '20xx Fly-By-Night' league in the league list, click on it once to highlight it. If not, skip this step.
4. Go to the 'League' menu and pull down to 'Restore League'.
5. In the dialog box, go select the .lzp league file you downloaded in step 1.
6. This should work, select the logical two responses in the dialog boxes and the league should appear if it hadn't already.

One helpful hint that happens occasionally. Some email programs change the file extension (the .lzp part of the name 20XXFN-x-x.lzp) and the game will not load. You will need to rename the file. To do this find the file that you downloaded. RIGHT click on the file name. Choose RENAME. Change the file name extension from whatever it is to .lzp. Hit enter. You should be okay now to follow the steps above from step 2 on.
